

# LIDGET GREEN MEMORIAL GARDEN PROPOSALS

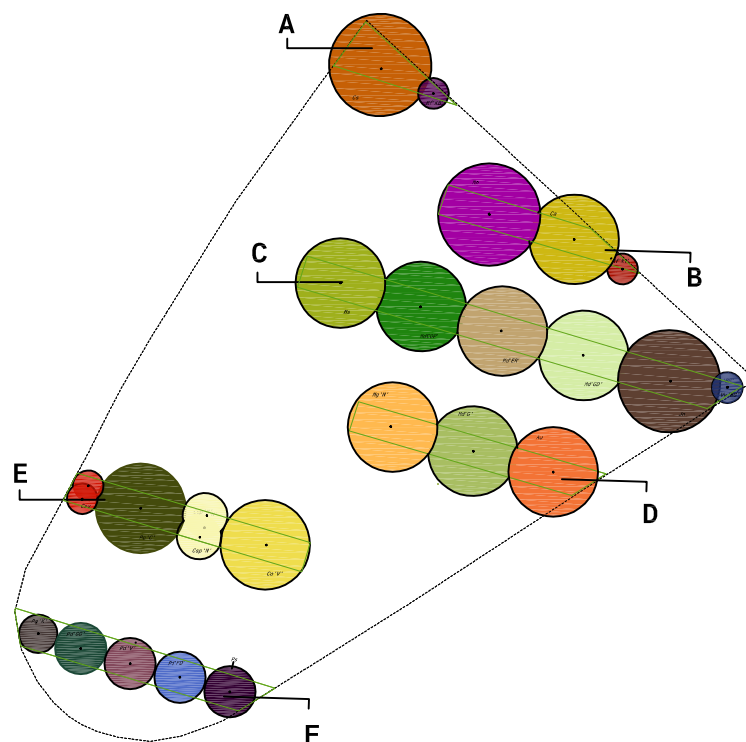

ETHOS: to arouse and evoke memory in the various textures, sights, scents, sounds and tastes that the garden forms and contains.

Associations with memorialisation in the form of memories from: the personal and intimate in the forms of traditional allotments plants; to the regional association of the White Rose and the rhubarb growing in the Rhubarb Triangle, of Yorkshire; to the red poppies that grew in the fields at Flanders following the end of the first World War; and the simple universal association of species such as rosemary for remembrance.

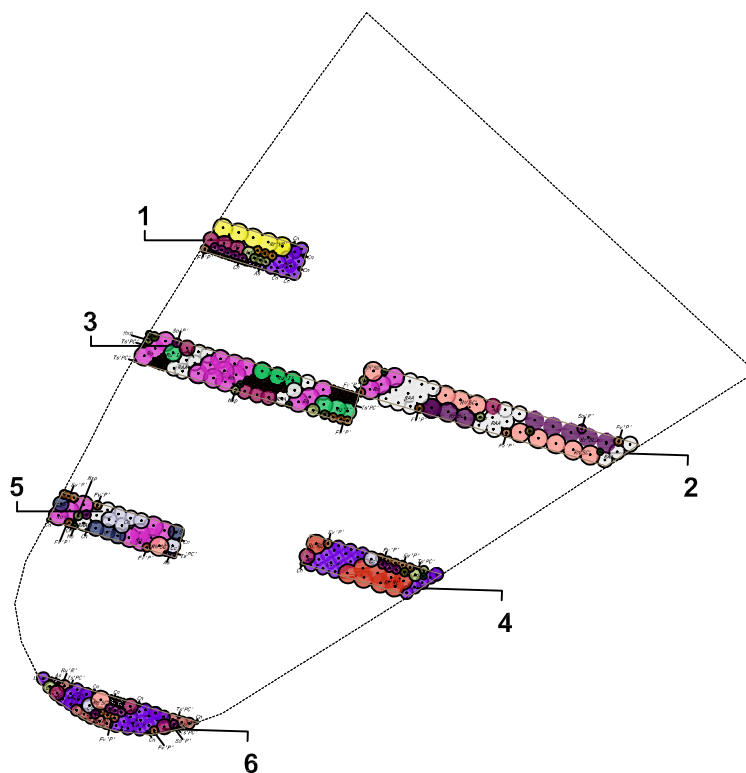

USES: every single species whether tree, plant or flower can be used productively, from the seeds of the poppy, to the leaves on the vine, the flowers on the lavender bushes to the hips on the rose bushes. All the species have been chosen where possible for their maximum wildlife value with particular regard to being bee friendly.

The garden will become a catalyst as well as an exemplar to provide a resource for local food production and processing in the manner of the Incredible Edible Todmorden 'Propergander' gardens.

### Planting Palette-linear orchard and nuttery

### Planting Palette-planting beds

		Linear orchard and nuttery species	Height	Spread	Centres (distance apart)	Number	Location
1.	Au	<i>Arbutus unedo</i>	4-8M	4-8M	3.0M	1	D
